

Safe information and document management in the business

Avira **AntiVir**[®] SharePoint

Solutions Server security / SharePoint platform

- ▶ Microsoft Office SharePoint Server 2007 (32 bit/64 bit)
- ▶ SharePoint Services 3.0 (32 bit/64 bit)
- ▶ Microsoft Office SharePoint Portal Server 2003
- ▶ SharePoint Services 2.0

SharePoint Server and SharePoint Services enable companies to improve communication and interaction between employees and departments. Important data and documents can be centrally stored and managed so that they are accessible to all. However, this involves the risk of viruses and malware spreading like wildfire via this platform. Avira AntiVir SharePoint puts a stop to this risk.

The challenge

The larger the data throughput at a certain point, the greater the risk of a virus infection. For this reason, Microsoft Office SharePoint Server and SharePoint Services are not only portals for authorized users but can also be gateways for virtual pests. A specific virus attack at this point enables unwanted malicious code to be sent out illegally, which in the worst case can paralyze a complete company. It is difficult

to estimate the damage such attacks can cause. In addition to financial losses, damage is also caused to the public image of the company, which frequently has a negative effect on the income situation of a company. If it can be proven that no security measures had been taken against such attacks and if other companies or persons have suffered damage as a result, consequences in terms of liability cannot be ruled out.

The solution

Central data storage and administration, search function, data linking, extendibility, data management, easy integration in other Microsoft applications and lots more besides – so that the advantages of Microsoft SharePoint Servers also remain advantages, comprehensive virus protection is required. Avira AntiVir SharePoint can be ideally integrated in Microsoft SharePoint products. The Avira virus scanner uses the Microsoft SharePoint Virus Scan interface and scans all files and documents in real-time. All files and documents transferred via the SharePoint platform are scanned for possible malware infection by the Avira AntiVir Engine,

whose malware detection is one of the best on the market, without any noticeable time delay.

However, Avira AntiVir SharePoint is not just an add-on virus protection. In cooperation with Microsoft, as a Microsoft Gold Certified Partner, an integrated security solution was developed that can be completely configured via the SharePoint administration side. Update intervals, update sources, proxy settings and temporary memory can be configured as well as heuristic options, scanning scope and scanning depth for archives. In this way, Avira AntiVir SharePoint can be individually adapted at a central point to the requirements of the user or of the company.

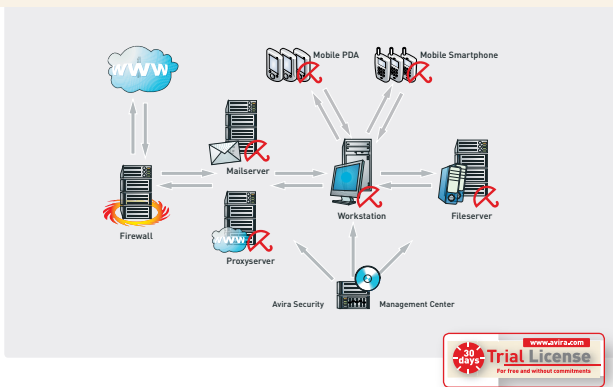

Your advantages

Avira AntiVir SharePoint					
Optimum security	▶ Integrated virus and malware protection	Low costs	▶ Extremely low administration efforts through full integration	High investment security	▶ Fast, resource-saving scanning technology
	▶ Reliable, extremely performing AntiVir technology with leading, repeatedly awarded detection performance		▶ Intuitive operation without long and expensive training times		▶ Transparent licensing designed to meet requirements without hidden costs
	▶ Fast reaction to new dangers through in-house malware research centers		▶ All licenses incl. free updates, upgrades and 14 day installation support; inexpensive bundles to protect the entire network		▶ Provider of cross-system solutions – “Made in Germany” – with over 20 years of experience in protecting the users

Avira AntiVir® SharePoint

Functions

Optimum protection against viruses & co.	
✓	Leading detection and elimination of viruses and malware
✓	Inovative AHeAD (Advanced Heuristic Analysis and Detection) technology to detect unknown or rapidly changing attackers for proactive security
✓	Real-time monitoring of every file access through on-access scanner
✓	Automatic archive detection (ZIP, RAR, GZIP, ARJ, LZH, LHA, ACE etc.) through smart detection technology with selection of the archive types to be scanned, maximum compression rate, maximum number of files and configurable recursion level
Fast, automated updates	
✓	Extremely small, bandwidth-saving updates of the virus detection pattern database and the program through incremental VDF updates
✓	Fast, seamless protection through updates without interrupting the system
Efficient configuration and administration	
✓	Direct integration into the Microsoft SharePoint Services and the Microsoft Office SharePoint Server by using the internal Microsoft SharePoint Virus Scan API
✓	Full configuration and administration through a special configuration page, which is integrated into the SharePoint HTML administration page
✓	Available configuration options: update interval, source for updates (HTTP or CIFS shares), proxy settings, temporary storage, heuristic settings, archive options

System requirements and licensing

	RAM	HDD	Other
Microsoft Office SharePoint Server 2007 (32 bit/64 bit)	at least 512 MB	at least 100 MB available hard disk storage	at least Intel Pentium III compatible processor or x64 compatible 64 bit processor
SharePoint Services 3.0 (32 bit/64 bit)			
Microsoft Office SharePoint Portal Server 2003			
SharePoint Services 2.0			
Information on the Avira product's lifecycle and a corresponding overview can be obtained from: http://www.avira.de/en/support/product_lifecycle.html			

Licensing	One license for all supported platforms; licensing per protected user; license periods: 1 year and 3 years; license extensions with a saving of 30 per cent
Scope of license	Free updates and upgrades during the entire license period, 14 day installation support (telephone and email); free platform change; software and documentation downloads
Support (optional)	Avira Gold Support: 8/5 support by telephone/email Avira Platinum Support: 24/7 support by telephone/email

About Avira

Avira is a worldwide leading supplier of self-developed security solutions for professional and private use. With more than twenty years of experience, the company is one of the pioneers in this field.

The security expert has several locations in Germany and partnerships in Europe, Asia and America. At its headquarters in Tettang near Lake Constance, Avira is one of the region's largest employers with more than 180 employees. Worldwide more than 250 persons are employed and their work regularly wins awards. Avira AntiVir Personal, used by millions of private users, represents a significant contribution to security.

Avira's national and international customers include renowned corporations listed on the stock exchange but also educational institutions and public authorities. In addition to protection of the virtual environment, Avira also provides for more protection and security in the real world by supporting the Auerbach Foundation. Established by the founder of the company, the Auerbach Foundation promotes charitable and social projects as well as the arts, culture and science.
